Task 1 - Data Collection & Data Source Identification

Objective

The objective of this task is to collect relevant data from reliable sources and understand different types of data used in data analytics.

Data Sources

Primary Data

Data collected directly from the source.

Examples:

- Surveys
- Interviews
- Observations

Secondary Data

Data already collected and available publicly.

Sources used:

- Kaggle
- UCI Machine Learning Repository

Dataset Used

Student Performance Dataset

- Source: Kaggle
- Format: CSV
- Type: Secondary Data

Dataset Description

The dataset contains student academic performance details such as:

- Gender
- Math Score
- Reading Score
- Writing Score
- Parental Education

Tools Used

- Excel
- CSV File Handling
- Basic SQL Concepts
- APIs (Conceptual)

Data Formats

- CSV (.csv)
- Excel (.xlsx)
- JSON
- SQL Database

Outcome

- Learned how to collect data
- Identified reliable data sources
- Understood primary vs secondary data
- Prepared raw dataset for analysis

Files Included

- dataset.csv
- Report (PDF)
- README.md
